PROFESSIONAL SUMMARY

Full Stack Python Developer with 4+ years of experience in developing scalable web applications using Python, Django, REST APIs, PostgreSQL, and cloud technologies. Experienced in enterprise application development, API integrations, AWS/Azure deployments, and frontend customization using JavaScript and Bootstrap. Skilled in building AI-integrated solutions, automation workflows, and database-driven systems with strong debugging and problem-solving capabilities. Passionate about delivering high-performance, user-focused applications in agile environments.

WORK EXPERIENCE

Python Developer - SDK Softwares

January, 2025 - Present

- Architected and developed a Marine Survey & Fuel Bunkering Management Platform using **Django REST Framework** and **PostgreSQL** with online admin/manager access and offline-first Flutter synchronization, enabling seamless field data capture and enterprise workflow digitization.
- Designed and implemented a **domain-specific data model** and **database architecture** for fuel bunkering operations, structuring barge inspection records, site logs, fuel measurement parameters, and operational workflows with a strong focus on data normalization, integrity, and scalability.
- Implemented a secure cloud deployment and enterprise access framework using **RBAC** (super admin, admin, and surveyor) with **AWS Cognito** authentication and **AWS SES** notifications and production-grade deployment on **AWS EC2** using **Nginx**, **Gunicorn**, **S3**, and **IAM**, along with PostgreSQL performance tuning and Linux server management.

Python Full stack Developer - Assurify Technology

April, 2023 - December, 2024

- Designed and implemented the **Device Care insure-tech** segment, collaborating with warranty and insurance partners to define product workflows and integration logic.
- Integrated **third-party warranty APIs** for electronics, gadgets, two-wheelers, and four-wheelers to automate policy creation, claim validation, and customer onboarding.
- Built a **scalable backend architecture** that improved workflow automation and expanded the company's insure-tech product portfolio.
- Architected and deployed the product suite in **Azure** using DevOps-enabled **CI/CD pipelines** for seamless, zero-downtime deployments.

Python Full stack Developer - Bigfix Gadget Care LLP

January, 2022 - March, 2023

- Designed and implemented a real-time, auto-refreshing **analytics dashboard** to track agent activities, call disposition statuses, live call connections, and bulk call assignments, improving supervisor decision-making and operational transparency.
- Integrated a TeleCMI-like **VoIP cloud calling service** with milestone-based dynamic pop-ups (100+ calls, leaderboard updates), leading to increased agent performance and improved call conversion metrics.
- Built an **IoT-driven** device vault management system using **Azure IoT Central**, IoT Cloud Hub, and a plug-and-play Android app for secure telemetry, remote commands, and device health monitoring.
- Architected and deployed applications in **Azure** using **CI/CD pipelines**, automating build, test, and deployment workflows for reliable and scalable releases.
- Designed, developed, and maintained multiple client websites using **SEO-friendly** practices and responsive **Bootstrap CSS** templates, ensuring optimized performance and enhanced user experience.

EDUCATION

Bachelor of Engineering (B.E.) in Computer Science and Engineering (CSE)

- SSJET, Chennai – Anna University | Nov 2020

First Class | CGPA: 7.24

PROJECTS

Containerized Django Deployment with AWS ECS

March, 2026

Tech Stack: Docker, AWS ECS, ECR, ALB, RDS, VPC, IAM, Cognito

- Built a container-based workflow for Django apps using Docker and AWS ECS, with image management powered by ECR and traffic routing handled through an Application Load Balancer. Added VPC networking, secure access rules, RDS PostgreSQL, and a full sign-in flow with AWS Cognito.

AI-Powered RAG Application with MongoDB - <https://enterprise-agent-studio.streamlit.app/>

May, 2026

Tech Stack: Python, MongoDB, Vector Search, LLM, Embeddings, RAG

- Developed knowledge of Retrieval-Augmented Generation (RAG) architecture for LLM applications.
- Worked with MongoDB vector search and embedding-based semantic retrieval workflows.
- Implemented concepts of document indexing, similarity search, and AI agent workflows.
- Strengthened understanding of LLM response optimization using contextual retrieval systems.

LLM-Based Invoice Processing System - <https://invoice-pro-using-llm.streamlit.app>

May, 2025

Tech Stack: Python, Streamlit, Gemini LLM, Pandas, OpenPyXL, Anthropic Claude LLM

- Built an AI-powered invoice system that handles PDFs, images, Word files, and scanned documents with quick, reliable processing.
 - Used Gemini LLM to pull clean, structured data and used Anthropic LLM to answer natural language questions about each invoice.
 - Designed a simple Streamlit page for uploading files, checking extracted details, and exporting them as CSV or Excel.
 - Published the tool on Streamlit Cloud for smooth access and fast performance.
 - Reduced manual work and boosted accuracy through smart LLM-based checks and extraction.
-

CERTIFICATIONS

- Fundamentals of **AI Agents** in LLMs - Hugging Face (2025)
- Building **RAG Apps** Using MongoDB - MongoDB (2026)
- CRUD operations and Indexing Design Fundamentals - MongoDB (2026)
- Relational Model to **MongoDB's Document Model** - MongoDB (2026)
- Get Started with Databricks for **Generative AI** - Simplilearn (2025)
- Introduction to **Amazon API Gateway** - Simplilearn (2025)
- Plan an **Azure AI** Document Intelligence Solution - Microsoft (2024)
- MongoDB Developer's Toolkit: CRUD Mastery with Python - Geeks for Geeks (2024)
